## **TSC**

### **TINTE A SOLVENTE PER INTERNI**

Le tinte a solvente per interni della serie **TSC** sono pronte all'uso e adatte per applicazioni a spruzzo. Su richiesta è possibile avere anche la versione a spruzzo da stracciare.

Rappresentano l'ideale abbinamento dei migliori pigmenti e coloranti disponibili sul mercato, diluiti in appositi veicoli, in grado di esaltare la naturale bellezza del legno.

Assicurano un'eccellente bagnatura del supporto, donando un'ottima uniformità del colore, una gradevole marcatura del poro, una notevole brillantezza e stabilità nel tempo. Destinate all'arredo per interni, garantiscono un'elevata resistenza alla luce.

Grazie alla loro compatibilità e miscibilità, oltre alle tinte disponibili a catalogo, si possono ottenere, mescolandole tra loro nelle proporzioni desiderate, innumerevoli altre tonalità e diversi colori personalizzati.

Come supporto, è stato utilizzato il Rovere Europeo Rigato. I colori sono stati fissati con un ciclo acrilico. Grazie all'elevata versatilità delle tinte e alle loro caratteristiche, si possono ottenere ottimi risultati su varie essenze legnose a poro aperto o chiuso: dalle più nobili, come Noce, Quercia, Castagno, alle più comuni, come Pino, Larice, Frassino, Noce Tanganica, Ontano, Faggio, Betulla e molte altre.

Il risultato dell'effetto può essere influenzato da vari fattori, quali: diversa tipologia di legno scelto, condizioni applicative, ciclo di verniciatura ed eventuali diluizioni. Si consigliano pertanto adeguate valutazioni preliminari e preventive prove di tinteggiatura. I colori rappresentati sono indicativi.

## **SOLVENT-BASED INTERIOR STAINS**

The solvent-based interior stains of the **TSC** series are ready to use and suitable for spray applications. On request it is also possible to have the spray version to remove with a rag.

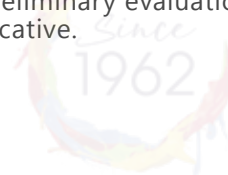

They represent the ideal combination of the best pigments and colorants available on the market, diluted in specific vehicles, able to enhance natural beauty of wood.

They ensure excellent wetting of the surface, giving optimum color uniformity, a pleasant pore marking, a considerable brilliance and stability over time. Intended for interior furnishings, they guarantee high resistance to light.

Thanks to their compatibility and miscibility, in addition to the stains available on catalog, countless other shades and different customized colors can be obtained by mixing them together in the desired proportions.

The support used was the European Striped Oak. The colors were fixed with an acrylic cycle. Thanks to the high versatility of the stains and their characteristics, excellent results can be obtained on many other open or closed pore wood essences: from the most noble, such as Walnut, Oak, Chestnut, to the most common, such as Pine, Larch, Ash, Tanganyika Walnut, Alder, Beech, Birch and many others.

The result of the effect can be influenced by various factors, such as: different kind of wood chosen, application conditions, coating system and any dilutions. Therefore, adequate preliminary evaluations and preventive coloring tests are recommended. The represented colors are indicative.
